PROJECT UPDATES

The Amblebrook Section D Sewage Pump Station (below left) has been completed and placed in service on September 9th. This pump station is part of the third phase of residential development at Amblebrook and will serve 225 residential customers.

New Construction for the Eagle View Mobile Home Park acquisition is complete with installation of ~6,500 feet of water main. Distribution/Meter Shop have nearly completed installation of meter pits for the residents. York Excavating is continuing work on the construction of the new water booster station (below right). The plan is to have the booster station and main extension in service and providing water to the mobile home park before the end of November.

Right: Alex Zook and John Fetterhoff on the dock of the Paradise Township sewer plant in Lancaster County. York Water took over contract operations October 1st prior to ownership upon PUC approval.

TEAM RAPTOR ERP UPDATE

🚀 **NEXT STOP: GO-LIVE!**
After years of planning, testing, training, problem-solving and a whole lot of teamwork… we're almost there!

On Monday, November 2, York Water will officially go live with our new ERP systems.

Over the past several weeks, coworkers across York Water have been training in the new systems, validating converted data, testing real-world processes and helping prepare their teams for Day 1. Behind the scenes, the project team and our partners have been working through the final details of the cutover plan and preparing for the transition.

📅 **THE FINAL COUNTDOWN**
Thursday, Oct. 29 → Cutover begins
Friday–Sunday → Data migration, validation & final readiness
Monday, Nov. 2 → WE GO LIVE! 🎉

💚 **THANK YOU, TEAM YORK WATER!**
This has truly been a company-wide effort. To everyone who has tested, trained, validated data, documented processes, answered questions, learned something new or simply rolled with the changes along the way: thank you. We've spent a long time preparing for this moment.

Next stop: Go-Live! 🦖🚀

Pictured below: A few weeks ago, York Water joined project team members and consultants to complete our ERP Business Capability Workshops. These sessions walked through real-world business processes across the company to help confirm that our people, processes, and technology are ready for Day 1 operations in the new system.

Welcome to the team!

We have recently welcomed four new team members!

From left to right:
- Trevor Trout- Construction Technician
- Alyssa Pritchard- Engineer
- DeShundra Dumas- Field Customer Service Representative
- Jennifer Doran- VP of HR

Lil Reynolds continues to encounter critters while working at our wastewater plants! Whether they need a helping hand or are simply enjoying a little sunshine, Lil is always happy to come across these unexpected visitors.

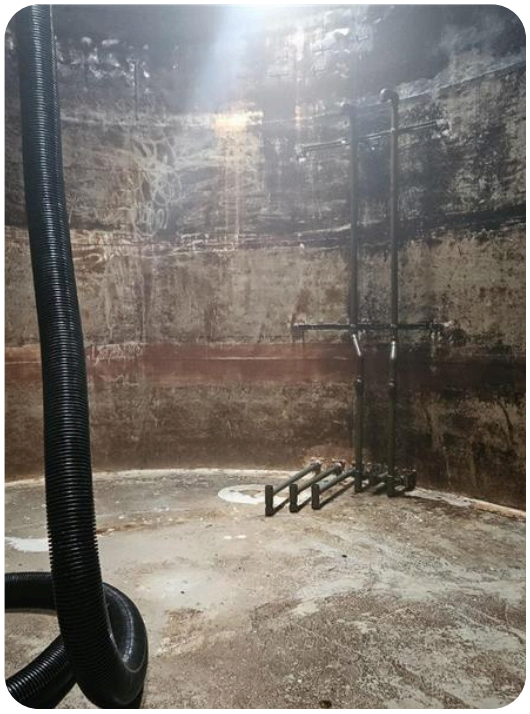

EAST KING STREET VALVE REPLACEMENT

Distribution and York Excavating crews recently replaced a broken 16" valve on a 24" main along East King Street and installed a new 20" valve. This project was especially significant because York Water does not typically work with mains of this size, making it a unique and challenging project for the crews.

WESTERN CUMBERLAND TANK CLEANING

The Maintenance & Grounds department, with support from the Electronics department, recently completed the draining, cleaning, and disinfection of the Western Cumberland concrete storage tank serving the Lincoln Estates community in Gettysburg. This project was undertaken in response to customer water quality concerns and required the tank to be temporarily taken out of service. To maintain operations, the team designed and installed a semi-permanent piping arrangement to connect the temporary pressure tank, "Big Blue," to the distribution system. The new setup was intentionally designed for easy future reconstruction, as tank cleaning is expected to become a semiannual maintenance activity. The project showcases the team's ingenuity, collaboration, and commitment to delivering safe, high-quality water service to our customers.

HOUSTON RUN TANK REHABILITATION

York Water recently completed the rehabilitation of the Houston Run Tank. The project included interior and exterior repairs, blasting, recoating, painting, and sanitization before the tank was refilled. These maintenance projects help preserve our water storage infrastructure, ensuring reliable capacity and dependable service for years to come.

1898 CAST IRON MAIN

Distribution, Construction, and Engineering departments successfully cut and capped a 20" 1898 cast iron main that runs underneath the Codorus Creek between South Penn Street and West College Avenue in advance of a state project to replace the West College Avenue bridge. In order to do this, three years of analysis, planning, design, permitting, and construction was required to build a new water main on the South Penn Street bridge. Additional projects are forthcoming to further improve the hydraulics and resiliency of the water system in this area.

Congratulations!

...to Page Karsteter for passing his exams and receiving his PADEP Water Operators Certification license!

KUDOS

We've received several thank-you messages and notes of appreciation from organizations that York Water proudly supports.

- York College thanked the team for coordinating with them on the timing of jobs that impact the school. The administration said that they greatly value our collaboration and ongoing support.
- Prospect Hill Cemetery thanked York Water for our time, presence, and dedication for this year's Court of Valor and SafeKeepers Shrine Ceremony, which is held to honor veterans, first responders, and K-9 officers.
- Ron Bunce, the President and CEO of the Children's Home of York, thanked York Water for raising funds to support children in our community at our Employee Picnic by dunking JT.
